

Nano100 Series CMSIS BSP Revision History

Version 1.00.004 (Released 2012-12-18)

1. Some minor fixes to remove compilation warnings.
2. Added semihost sample applications.
3. Added "NuTouch" sample code and Windows tool.
4. Fixed USB driver to pass Chapter 9 test.
5. Added HIRC selection for UART reference clock to the following files:
 - Samples\Driver\Common\sytem_nano1xx.c
 - Samples\Nu_LB\Common\system_nano1xx.c
6. Added the Smartcard_UART sample under driver.
7. Fixed project path and setting of Nu-LB\TK_LCD
8. Removed the "Drv" keyword from "Smartcard.c" and "Smartcard.h".
9. Updated the following files:
 - SDCard.c (SDLIB). More stable when using SDHC card.
 - spiFlash.c (spiFlashLib). Improved performance by using SPI FIFO instead of single R/W method.
 - UART driver / sample. Fixed some irDA problems.
 - LCD driver. For fixing LCD unused pin issue.
10. Updated Nano1xx.h, Nano1xx_lcd.c, and TK_LCD_main.c for LCD_Init pin settings.
11. Updated Driver/USB samples for HIRC.
12. Updated nano1xx_fmc.h => Added FMC_EnableAPUpdate()

Version 1.00.003 (Released 2012-10-16)

1. Added the "Nu_LB" sample code.
2. Removed a debug message that can cause transfer time out from SmartCard library.

Version 1.00.002 (Released 2012-10-02)

1. Added the CardReader and NuTouch sample code.
2. Added the Nu_LB\UDC_SDCard sample code.
3. Added .\Libraries\NANO1xx_Libs\SDCardLib
4. Updated the SmartCard library.
 - Changed Tx FIFO empty interrupt disable timing to avoid the unwanted interrupt change status flag.
 - Modified the T1 command process code.

Version 1.00.001 (Released 2012-09-04)

1. Removed the register bit definitions from nano1xx.h.
2. Added NUTINY-EVB_NANO130 Touch Key Demo.
3. Added the doxygen comments.

Version 1.00.000 (Released 2012-08-28)

1. Primary release version.

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

*Please note that all data and specifications are subject to change without notice.
